DMI WeatherSeam

DMI WeatherSeam

Figure 1, Installation Lapping

Figure 2, Single Seam Lock

Figure 3, Double Seam Lock

WeatherSeam, the classic architectural standing seam profile system that provides architect a large degree of freedom, in terms of rib height and panel width. With mechanical locked seam, the profile's reliability proves itself even under extreme weather. When require **DMI WeatherSeam** can be build in a system to meet the next level of sound insulation (STC Requirement) and thermal insulation (U-value requirement).

DIMENSION

DMI WeatherSeam is available in length up to 9,000 mm custom-cuts to length of requirements. This profile also allows custom linear width or tapered width roof upon request. If requires, the profile rib height may also be adjusted to suit architecture requirements.

TOLERANCES

Length : ± 5 mm Cover Width : ± 3 mm Rib Height : ± 1 mm
